

Notice that I have created a User Group "Super-Admin". This User Group is set to active "Active".

I open this administrator account and there is no place to edit the “User Group”. The “User Group” tab does not exist.

I open a customer's user account and notice that there is a "User Groups" tab to click on.

I click on the "User Groups" tab but there is no administrator user groups listed!

From what I can tell, there is no place in the cart to change the "Administrator User Groups".

Can you tell me how to do this?
